

Essbase Introduction Course

This tailored course is aimed at administrators or developers wishing to gain knowledge in the fundamental aspects of Hyperion Essbase. The course is designed to give students the knowledge required to quickly and effectively build efficient applications on the Essbase platform. The duration of this course is three or four days depending upon the number of delegates and is designed to be custom fitted to the nature of applications within your own organisation. It is your choice whether the mechanism used to build applications during the training is Administration Services or Application Manager.

Audience

Application developers or administrators requiring an introduction to building applications using Essbase.

Pre-requisites

Knowledge of Microsoft Windows and Excel

Duration

3 / 4 days

High Level Course Agenda

(Please note these are descriptions of the course content not the individual unit topics)

- Explanation of Business Intelligence and Essbase
- Concepts of Hyperion Essbase and Essbase Administration Services
- The steps required to build efficient applications
- Building database structures dynamically
- Loading data from different formats
- The building blocks of data storage
- Calculating data
- Reporting data using Excel
- Administration, automation and security

Course Notes:

Hyperion courses can only take place on the client site although M2Bis are able to provide client machines for training purposes.

Practical exercises with the Essbase Introduction Course use the Essbase Block Storage method (as opposed to Aggregate Storage). Aggregate Storage is explained but students will not build applications of this type during the course exercises.
